

Cruising power

Jean-Dominique Zanus was tucked away in a quiet corner of the boat show with his prototype water generator, the Save Marine H240. It's scheduled for full launch at December's Paris Boat Show, but it is designed for cruising boats at speeds of 3-8 knots and should generate 150W at 5 knots. It starts generating at 2 knots, so you could leave it over the stern on a river mooring. It fits any transom, weighs just 7kg and it's maintenance-free.
